

turbo.264 HD

Video converter with hardware accelerator

The fast and easy way to convert camcorder & video files for iPad, iPhone

Convert any video file for iPhone and iPad playback, and get instant access to HD camcorder video from your Mac. Turbo.264 HD uses advanced encoding technology to generate superior-quality video in standard and HD resolution up to 1080p.

Turbo.264 HD video converter software is fast and easy to use, and can handle nearly any kind of video file including downloads, MKV files, and AVI files. Turbo.264 HD saves you an incredible amount of time – especially if you use an HD camcorder – because you can preview and crop video instantly, before converting it.

Use the converter software on its own or with the included hardware accelerator. The hardware accelerator connects via USB and acts as a “co-processor” to accelerate video conversion on even the fastest Mac. It also accelerates the delivery of EyeTV recordings to iPhone and iPad, and maximizes the live TV picture quality of the EyeTV app.

What's in the Box

- Turbo.264 HD video encoder hardware
- Turbo.264 HD video converter software (CD-ROM)
- USB cable

System Requirements

- Macintosh computer with Intel Core processor
- 512 MB of RAM
- Built-in USB 2.0 port
- We recommend Mac OS X 10.6.6 or later with all software and security updates installed.
- QuickTime 7.6 (or later)
